*Seen in count area during count period but not on count day.

SPRING BIRD COUNT—1976

HARRY E. LeGRAND JR.

Inclement weather on weekends in May and only mediocre results from the coastal counts were the principal factors in producing a lackluster 1976 Spring Bird Count, with a rather low grand total of 254 species (eight below the 1975 total). There were no truly outstanding sightings of rarities, and 14 of the 22 localities having counts in both 1975 and 1976 declined in species as compared with 1975. Moreover, nine of these 14 dropped at least eight species, and two counts tallied at least 20 fewer species than in 1975. As a general rule, the number and quality of coastal counts on the Spring Count contribute far more to the success or failure of the Count (in terms of species) than any other factor. Thus, with only three coastal localities represented (all well below their 1975 totals), the Count was not able to attain the quality of those for the past five or so years.

Morehead City (167 species) edged out Wilmington (166) for first place, with Charleston third at 161. Raleigh (148) and Winston-Salem (148) led the inland counts, though both broke 150 last year. Other successful inland counts, all with record-breaking species totals, were Roanoke Rapids (144), Clemson (143), Chapel Hill (136), and Fayetteville (123). Fayetteville, Stanly County, and Avery County return to the Spring Count table after absences of several years. This year, as in 1975, 25 counts were submitted, but unfortunately the important Hilton Head, S.C., area was not represented in 1976.

Rain fell on 10 of the 25 counts; most of these were piedmont and mountain counts held on 1, 2, 8, or 15 May. A few areas even postponed their counts because of actual or predicted rainfall. Several compilers mentioned that the severe April drought had a negative effect on their counts, and other counts were hurt by a late spring migration that peaked after the count days.

Even though there were no "accidentals" reported on the 1976 Count and no true additions to the cumulative Spring Count species list (Parasitic Jaeger removes "jaeger sp." from the list), a number of noteworthy sightings were made. The most exciting were single Mississippi Kites sighted far north of their range at Durham and Roanoke Rapids, and inland records of species seldom seen away from the coast: American Oystercatcher and Painted Bunting at Fayetteville, and 2 Stilt Sandpipers at Clemson. Other highlights were the 2 Parasitic Jaegers and Long-billed Curlew again at Morehead City, a Black Rail at Clemson, and a pair of Merlins at Raleigh. Notably high grand totals were made of three species of buteos. Spotted and Solitary Sandpipers. Barn Owls, most swallows, and Eastern Bluebirds (numbers continue to increase in the Carolinas). Very high individual counts were the 10 Least Bitterns and 11 American Bitterns at Raleigh; 11 Swallow-tailed Kites, 227 Spotted Sandpipers, and 425 Pine Warblers at Charleston; 22 Barred Owls at Chapel Hill; 19 Worm-eating Warblers and 268 Prairie Warblers at Morehead City; and 239 Evening Grosbeaks at Wilmington. Disappointingly low grand totals were 44 Glossy Ibis, no Bald Eagles or Black-necked Stilts, a surprising scarcity of most rails, low shorebird numbers on the coastal counts (especially "peeps"), only 48 Greater Yellowlegs, just 2 Bonaparte's Gulls, low counts of both marsh wrens, and 68 Kentucky Warblers (found on only 12 counts). Rail totals were also quite low on the 1975 Christmas Bird Count; perhaps rail populations are actually declining, or are birders no longer walking in marshes or listening for the calls of these birds?

Several comments about the Spring Count seem necessary. Even though each presently established count group becomes more experienced in birding ability and more familiar with its count circle with each passing year, there is still little growth in the Count in terms of new count localities. We still need more coastal plain counts, and only three counts along the immediate coast is disappointing. There are several factors relating to the stagnancy of this Count: most counts have to be restricted to weekends,

84 The Chat

making it difficult for an individual birder to assist on more than two counts (some counts depend heavily on birders recruited from other towns); the Carolina Bird Club's Spring Meeting often falls on the last weekend of April or the first weekend of May, and thus often interferes with some counts; and many colleges hold examinations during late April and early May, causing some observers to give up birds for the books. Perhaps the lack of national publicity (spring counts are not published in American Birds) is another reason that birders are reluctant to start a new count. Another subject of concern is the timing of a town's count date with the peak of the spring migration. I feel that many inland counts hold their counts from several days to more than a week too early. These counts barely hit the beginning of the passerine migration, especially the warbler migration. Some counts are held so early that such common summer resident species as Acadian Flycatcher, Eastern Wood Pewee, Yellow-breasted Chat, Blue Grosbeak, and Indigo Bunting, as well as a few common transients (such as the Blackpoll Warbler), are completely missed on count day! Other counts are held so early or are so weak that they can't find 10 species of warblers, or even 25 individual warblers! Admittedly the peak number of species present in an area seems to be highest in the last few days of April or the first few days of May, partly due to late departing winter residents, yet the peak migration of passerines is usually 3-10 May in most inland areas.

Compilation of the counts continues to improve. Editing the Count was fairly easy this spring, partly because few truly rare sightings occurred on the counts. I did reject the following questionable records, with my reasons for doing so: a nearly unbelievable 13 Yellow-bellied Sapsuckers on a mid-May count (too many for a mid-May count), a Yellow-bellied Flycatcher (very rare), 2 Least Flycatchers from a coastal plain count (too far east), and 55 Rusty Blackbirds (too many for a spring count; these and probably many others of this species reported on spring counts are likely to be juvenile or perhaps even adult Common Grackles).

I would like to thank all observers and compilers who participated on this Count. I particularly admire those birders who are in the field well before sunrise and well after sunset. Durham had birders owling from midnight to midnight, and Winston-Salem also had people in the field beginning at midnight. We hope that the 1977 Count will be blessed with beautiful weather, an abundance of rare sightings, many record-breaking individual counts, and an increase in observer and locality participation.

COMPILERS' COMMENTS

COAST

MOREHEAD CITY, N.C. (center: 0.7 mile NW of Crab Point in Newport River).

24 April. Count day was warm, dry, and windy. Winter birds left early this spring, but summer birds were not early. One Anhinga was at Huntley's Impoundment (David Whitehurst) and two were soaring near Walker's Mill Pond (Compiler, Kevin Hintsa); this is a new species to the count. Single Broad-winged Hawks, rare migrants in this area, were seen near Core Creek bridge (Donna Goodwin) and at Harlowe (Compiler, Goodwin, Hintsa, Darryl Moffett). Black Rail (Compiler) responded to a tape recording in North River Marsh at 0300. Several other Black Rails were heard in these marshes this spring. Several observers saw the same Long-billed Curlew on Bird Shoal that had been present on last year's spring count and the past two Christmas counts. The Black Tern, in breeding plumage, was seen by many birders; it was the earliest record for the area (other spring records only in May and June). R.I. Hader saw the Parasitic Jaegers flying E about 100 yards from the beach at Fort Macon; characteristic jaeger shape and flight noted, and the birds were approximately the size of Laughing Gulls. Hintsa saw the Black-billed Cuckoo at close range at Mill Pond, noting the reddish eye-ring and black upper and lower mandibles. White-rumped Sandpiper, Long-billed Dowitcher, and Stilt Sandpiper are apparently regular in spring at North River. The remarkably high 19 Worm-eating Warblers were observed at several locations by the Compiler, Hintsa, and Moffett. One Ground Dove (Hader) was near Fort Macon on 25 April. [Excellent details for all unusual observations.—HL]—JOHN FUSSELL III, P.O. Box 520, Morehead City, N.C. 28557.

WILMINGTON, N.C. (center: Monkey Junction). 24 April.—FRANCES B. NEEDHAM, Box 81, Wilmington, N.C. 28401.

CHARLESTON, S.C. (center: 14 miles NE of Mt. Pleasant and 0.5 mile E of US 17).

2 May. The area from Copahee Sound to Bull's Bay (estuaries, tidal flats, marsh, etc.) received less extensive coverage than last year. The majority (about 200) of the unusually high number of Spotted Sandpipers were distributed throughout this area and on Caper's Island. Purple Gallinules are appearing on the mainland in increasing numbers, perhaps in response to the greater availability of suitable habitat. The 2 Black-billed Cuckoos were both seen and heard by a half dozen observers. Chestnut-sided Warbler (Perry Nugent) and the Cape May Warbler (E.C. Clyde) were seen at close range. The Compiler heard the Worm-eating Warbler.—JULIAN HARRISON, Biology Department, College of Charleston, Charleston, S.C. 29401.

COASTAL PLAIN

BEAUFORT COUNTY, N.C. (center: entrance of Upper Goose Creek into Pamlico River).

9 May. The Bank Swallow (Compiler, Elizabeth Ball) was seen on a wire with Tree and Barn Swallows.—GERALDINE COX, Route 1, Box 151A, Merritt, N.C. 28556.

PAMLICO COUNTY, N.C. (center: in Florence at intersection of 1324 and 1329).

2 May. Marvin Turnage and Theresa Lafond saw the 3 Brown Creepers clearly. The faint song was heard; spiral climbing behavior, pointed tail, and curved bill seen well.—GERALDINE COX, address as above.

DILLON COUNTY, S.C. (center: Dillon).

27 April. Abundance of sandpipers due to mudflats present at most ponds caused by the lack of rain in April.—JOHN H. WILSON, Box 535, Dillon, S.C. 29536.

FAYETTEVILLE, N.C. (center: Fayetteville Market Square).

9 May. The 123 species was quite good for Cumberland County and was possible only because of the time and effort devoted by our group. The American Oystercatcher (Philip J. Crutchfield, Jim Crutchfield) was seen for an hour on a sand bar in a pond at Becker Sand and Gravel Company on the evening of 7 May. The bird was crow-sized, black above and white below, with a reddish bill. The female or immature Painted Bunting (Henry A. Rankin Jr., Mr. and Mrs. William D. Sherman) was seen at a yard feeder; it was a small, olivaceous, thick-billed bird, seen with the similar-sized Indigo Bunting. Other rather rare species seen on the count were Double-crested Cormorant, Caspian Tern, Bank Swallow, and Blackburnian Warbler.—JACK WINGATE, 3616 Crampton Road, Hope Mills, N.C. 28348.

SOUTHERN PINES, N.C. (center: 1 mile NE of Skyline).

27 April. The count was taken during an extended drought. Very few birds, even permanent resident and summer resident species, were singing. [Scarcity of Yellow-breasted Chat, Blue Grosbeak, and Indigo Bunting, in addition to the low total of 112 species, indicates that 27 April was too early for a good count this spring.—HL] Noteworthy species were Common Loon and Red Crossbill (Compiler, James F. Parnell); the Compiler saw the Double-crested Cormorants, Cattle Egret, and Cliff Swallows.—J.H. CARTER III, P.O. Box 891, Southern Pines, N.C. 28387.

COLUMBIA, S.C. (center: intersection of Gill's Creek and Bluff Road).

24 April. Although Annie Faver reported nests of the *Painted Bunting* in lower Richland County in 1952, this is the nearest approach to Columbia (within 2 miles of the center of the count area). [This count can produce at least 40 more species than the 67 reported. Two Cliff Swallows were reported, yet no Barn Swallows or House Sparrows were seen on the count?—HL]—GILBERT BRISTOW, 2921 Blossom Street, Columbia, S.C. 29205.

ROANOKE RAPIDS, N.C. (center: 1.4 miles SE of Weldon).

8 May. The Double-crested Cormorants, male Hooded Merganser, 20 Redbreasted Mergansers, and adult Laughing Gull were seen by the Compiler next to the dam on Roanoke Rapids Lake. The two pairs of Ring-necked Ducks were seen on Mush Island Beaverpond near Weldon. Kevin Hintsa identified the immature Mississippi Kite at Occoneechee Neck, where the species has been seen on several recent occasions. He noted the brownish, speckled coloration and long, narrow wings and tail, as the bird soared with both species of vultures. King Rail (Compiler) was clearly seen at Occoneechee Neck. The Semipalmated Plovers and Semipalmated Sandpiper (David Knapp, Ken Knapp, Mike Knapp) were at Johnston's Farm on Occoneechee Neck. Warbling Vireo was attracted to a Screech Owl call by Mike Tove at Johnston's Farm. He observed all field marks, including the dingy grayish or brownish-gray upperparts, whitish breast with a slight yellowish tinge along the flanks, an indistinct eye-line, and lack of wingbars. [Good details for all unusual species.—HL]—J. MERRILL LYNCH, 539 Henry Street, Roanoke Rapids, N.C. 27870.

PIEDMONT

RALEIGH, N.C. (center: Norfolk and Southern RR crossing on Lake Wheeler Road). 2 May. The count had to be postponed one day because of rain. Unfortunately, we then lost a number of participants and got substantially reduced coverage of usually productive areas, such as Umstead State Park. Ken, David, and Michael Knapp found a Common Gallinule and several waterfowl stragglers at Lake Benson headwaters with the use of a canoe. Singing House Finch (Kevin Hintsa) was at the Rose Garden where about 40 spent the winter. Two days later he found a female with the male at the same location. Chris Marsh found two singing Swainson's Warblers and Ray Winstead found a third, all along Swift Creek. A pair of Merlins was seen by Darryl Moffett at close range on 3 May from the roof of the Museum of Natural History. The Lincoln's Sparrow (Clark Olson) was carefully studied near Lake Raleigh on 8 May. He observed the finely streaked buffy breast, and he is familiar with the species.—R.J. HADER, 3313 Cheswick Drive, Raleigh, N.C. 27609.

DURHAM, N.C. (center: 1 mile N and 1 mile E of junction of Eno River and US 501). 24 April. The outstanding sighting was an adult Mississippi Kite seen along the Eno River east of Roxboro by Mike Schultz. He observed the small to medium size; long, slender, pointed wings; long, square, black, unbarred tail; and characteristic kite shape and flight. This is the first piedmont record of the Mississippi Kite for North Carolina. The five Red Crossbills (many observers) were observed on several occasions behind the Duke University Physics Building. Lance Peacock, Douglas Brame, and Bob Dyle found both species of yellowlegs and a pair of Blue-winged Teals at Needham's Farm. Owen and Jim McConnell sighted the Cattle Egret; Least Sandpiper (Angelo Capparella, Eric Garner, Jay Garner, Lois Garner) was near the sewerbeds. [I received full details for 17 species, all written directly by the observers on separate sheets of paper and submitted intact by the compilers. Though I had some trouble keeping track of eight pages of details, and such compiling may cost 10 or 20 cents extra postage, this is the best and easiest way for the compiler of a count to send me complete

details of rarities.—HL]—MARK HUFF, School of Forestry and Environmental Studies, and JOHN HORN, Department of Botany, both of Duke University, Durham, N.C. 27706.

CHAPEL HILL, N.C. (center: Columbia and Franklin Streets in Chapel Hill).

2 May. This year's count topped our record species total (134 last year) by two. Of greater interest was the greatly increased number of individual birds counted (1.58 times our previous high of last year). This is reflected almost equally throughout the list, rather than just with a few species. The greater number of field parties (24 versus 14 last year) as well as a higher total of party hours, coupled with the fact that we had more experienced birders this time and perfect weather, may provide major clues. Increased bird populations would certainly not seem indicated. The Pectoral Sandpiper (Robin Carter, Carlie Eastman) was the first for the count since 1950. Angelo Capparella and James Coman found 2 American Bitterns at University Lake; another was seen by Charles and Ella Newell at Hogan's Farm. The Semipalmated Plover and 2 Water Pipits were seen by James Pullman and Elizabeth Teulings. A late Red-breasted Nuthatch was clearly seen by Capparella and Coman. Warbling Vireo (Hal and Debbie Frazier) was first detected by song and then carefully studied; all field marks were seen. A Philadelphia Vireo was seen on 3 May by Annie Leigh Broughton, the bird had pale yellow underside from the throat to the legs, a stripe through the eye and light stripe above the eye, and no wing bars. Five Red Crossbills (Steve Graves) were carefully studied on 5 May. [This is the best organized spring count in the Carolinas, with 24 field parties divided into specific sectors, and even a printed, species-by-species count form showing the number of years each species has been seen on the last 17 spring counts! Very good details, most of which were submitted as described under the Durham count.—HL]—BARBARA ROTH, 7 Lone Pine Road, Chapel Hill, N.C. 27514.

GREENSBORO, N.C. (center: transmitter tower of Radio Station WBIG).

1 May. The number of species was down this year because of rain. The 2 Sanderlings (Compiler) were on the beach of a small suburban lake which had been all but drained. The buffy-red coloring on the back and breast, the relatively large size of the birds, the black legs, and rather heavy black bill were seen well.—DONALD ALLEN, 2611 David Caldwell Drive, Greensboro, N.C. 27408.

WINSTON-SALEM, N.C. (center: intersection of I-40 and Silas Creek Parkway).

1 May. The adult Little Blue Heron (Joe Neely) was a rare spring sighting, but the adult Black-crowned Night Heron (Charles Frost) on 27 April, seen on a dead tree limb over a pond, was the first record for Forsyth County. The immature Yellowcrowned Night Heron, seen by Pat Culbertson, was a streaked grayish bird, and the tarsus extending beyond the tail was seen as the bird was flying from a marshy area to a lake at Reynolda. American Bittern, seen by many observers on 5 May, was only the second county record. Ring-necked Duck (Bill and Susan Hammond) and Marsh Hawk (Gardner and Margaret Gidley) were late sightings on count day. Common Gallinule (Muriel Dennett and the Gidleys) was at a small reedy pond in the western part of the county. Semipalmated Plover was seen by many observers at the sewage treatment plant; however, because of the drought sandpipers were in much smaller numbers and species at this site, where shorebirds are usually numerous at the overflow basin. An unusually large number of Solitary Sandpipers seemed to be distributed throughout the county. Only one Ringed Turtle Dove was seen this spring; the species has steadily declined in the last 2 years although fledgling birds were found last year. Glenys Gallaher saw 2 Yellow-bellied Flycatchers in a pine tree on 2 May. The uniform yellow of the throat, breast, and belly was clearly seen, as were the yellow eye ring and yellowish wingbars. Late species included a Winter Wren (Fran Baldwin) on 30 April, a Golden-crowned Kinglet (Frost) on 27 April, and count day Red-breasted Nuthatch (Ruth Hill, Barbara Page, Peggy Cochrane) and Hermit Thrush (Compilers). The singing Long-billed Marsh Wren (Bob Witherington, Bert Hollifield) was at the place where two were seen last spring. Three Warbling Vireos were seen during the count period or on count day by the Compilers, Glenys Gallaher, and Charles Frost; all were first heard singing and then observed. [Thank goodness the vireos were singing! I am skeptical of some sight records of non-singing Warbling Vireos in the Carolinas-HL] Rare warblers seen on the count or during count period [all convincingly described-HL] were Golden-winged, Blue-winged, Tennessee, Nashville, Cerulean, Connecticut (Barbara Page, Peggy Cochrane), and Wilson's. Swainson's Warbler (Zach Bynum) was seen on 30 April and 2 May along Salem Creek. [Are the Swainson's that have been seen on this count for the past several years all migrants, or is there a mid-piedmont breeding population here?-HL] The pair of Brewer's Blackbirds (Mary Eriksen) was seen on count day and again on 7 May at a yard feeder; female was grayish-brown with a dark eye, and male showed a green sheen with bluish-purple on the head. The warbler migration was very poor this spring, with no large waves or peak days. Also, the warblers arrived later than usual, as evidenced by the lack of Blackpoll and Bay-breasted Warblers on count day. [Excellent details for the many rare sightings, and the large number of count period birds shows that there are many observers who do not confine their birding activity to just two days a year.—HL]—FRAN M. BALDWIN, 1030 Englewood Drive, Winston-Salem, N.C. 27106 and RAMONA R. SNAVELY, 115 Plymouth Avenue, Winston-Salem, N.C. 27104.

STANLY COUNTY, N.C. (center: 2 miles NW of Badin).

15 May. Heavy precipitation made birding impossible during the afternoon. Nine Cattle Egrets (Vera Crook) were late for this area. The Compilers found a Common Gallinule at Lake Tillery on 16 May, clearly seeing the dark gray color and the red frontal shield. They also found an adult Yellow-crowned Night Heron, 3 Sanderlings, and 2 Least Sandpipers at the lake on 17 May. Sanderlings were twice the size of the Leasts, with the white wing stripe, stout bill, and characteristic call note detected. The Saw-whet Owls were seen by Naomi Goforth at the Scout Camp, where they have been seen and heard on several previous occasions. [I hope other birders can check out these owls there, especially since 15 May is very late for this species to be lingering in the piedmont.—HL] Cliff Swallows (Barrett Crook, Harold Morris, Johnny Hahn) were observed nesting under the Yadkin River Bridge near High Rock Dam.—DAVID and LIDA BURNEY, Route 2, Box 211, Albemarle, N.C. 28001.

IREDELL COUNTY, N.C. (center: South Yadkin River Bridge on Chipley Ford Road).

** 8 May. Weather was unseasonably cold (40-56°F), cloudy, and windy, and these factors hampered the count. Warblers, except for the unusually large number of Northern Parulas, were not as numerous as in past years. Robins, Indigo Buntings, Eastern Bluebirds, and Mourning Doves were abundant. Common Grackles were nearly twice as numerous as Starlings. The Cliff Swallows were seen by Bobby and Dick Mize.—JANE S. MULLEN, 4125 Camelot Drive, Apt. A-3, Raleigh, N.C. 27609.

CHARLOTTE, N.C. (center: intersection of South Boulevard and Woodlawn Road).

15 May. For the second consecutive year rain throughout most of the day prevented adequate coverage of the count area. Ironically, the rain predicted for the selected count day in early May failed to materialize, but the expected precipitation did cause us to postpone the count until a mid-May "rain date" on which we had an unwelcome deluge. The rain and the lateness of the count resulted in a very low species total for this area. [Only nine observers on a count near a city with the population of Charlotte is very disappointing, as is the total of 71 species. If the weather is good next spring, I hope to see dozens of observers on this count and well over 110 species.—HL] Screech Owls (Robert Schmitt) were represented by a single family group consisting of a red phase male, a gray phase female, and a red and a gray young.—DANIEL E. READ JR., 1101 Rosewood Circle, Charlotte, N.C. 28211.

Fall 1976 89

GREENVILLE, S.C. (center: intersection of Highways 291 and 29). 8 May.—ROSA LEE HARDIN, Cleveland, S.C. 29635.

CLEMSON, S.C. (center: 3.5 miles SW of intersection of US 76 and SC 93 in Clemson). 4 May. The 143 species (exceeding the 1974 total by 7) was a truly remarkable count, considering that only five observers were in the field. Also, the spring migration here was nearly a week late; thus, we had not reached the peak of the warbler migration. Nearly all of the shorebirds were at farm ponds to the east of Pendleton, as Lake Hartwell was one-half foot above normal level. The Compiler and Kerry Reese heard a *Black Rail* calling from a marsh at Eighteenmile Creek at daybreak; kee-kee-kurr call was heard about a dozen times, but the bird could not be flushed. An adult was taken from a Screech Owl's nest in a Wood Duck box near this marsh in May 1975; thus, the possibility of breeding in the marsh is present. The 2 Stilt Sandpipers were found on farm ponds a mile apart near Pendleton by the Compiler and Bill Alexander. The rusty cheek and crown were very obvious, as were the barred underparts, bill with decurved tip, white rump, pale yellowish legs, and size slightly smaller than Lesser Yellowlegs. Forster's Terns (Sid Gauthreaux) were carefully studied at rest and in flight at Lake Hartwell; white primaries and white outer tail feathers were clearly seen. Compiler saw the Least Flycatcher and heard it giving the whit call in an overgrown field. Late sightings were a Red-breasted Nuthatch (Gauthreaux), a Winter Wren (Reese), and 10 Purple Finches (Reese). Reese also found a remarkably high 8 Tennessee Warblers. The swallow migration at Lake Hartwell,

ELKIN-RONDA, N.C. (center: intersection of I-77 bypass and US 21, 3 miles N of Elkin).

unpredictable from day to day, was in full swing on count day; noteworthy were the 190 Bank, 225 Barn, and 30 Cliff Swallows (all migrants).—HARRY E. LeGRAND JR.,

Department of Zoology, Clemson University, Clemson, S.C. 29631.

1 May. The 2 Northern Shovelers were seen by Jerry Tysinger on a settlement pond approximately 200 yards from the Yadkin River. The rufous-red sides, white breast, and characteristic profile were clearly seen.—LIN HENDREN, P.O. Box 148, Elkin, N.C. 28621.

CALDWELL COUNTY, N.C. (center: Lenoir).

28 April. [Why so early?—HL]—HELEN E. MYERS, 320 Beall Street NW, Lenoir, N.C. 28645.

MOUNTAINS

BREVARD, N.C. (center: 5 miles SE of Brevard at Rich Mountain Lookout Tower).

I May. This year's count was scheduled earlier than in any prior year, accounting for absences of species such as Common Nighthawk, Eastern Kingbird, Acadian Flycatcher, and Eastern Wood Pewee. Red-shouldered Hawk (Gaylord Lyon), only a migrant in this area, was a good find. Another rare migrant was the Chuck-will's-widow, heard by Norman Ellis. Purple Martins were finally reported on the count; this species migrates through every spring, goes in and out of bird houses for about a week, and then disappears. Other noteworthy species were Gray-cheeked Thrush (Art Wood), Loggerhead Shrike (the Hollands), Prothonotary Warbler (Doris Guest), and Northern Waterthrush (Betty McIlwain).—WALTER C. HOLLAND JR., 290 Maple Street, Brevard, N.C. 28712.

BUNCOMBE COUNTY, N.C. (center: intersection of US 70 and SR 2740 in Swannanoa).

1 May. Prothonotary Warbler (Mary Sawyer) was seen within 15 feet of the observer's dining room window; habitat was a mountain woodland, with a small stream and swamp about 700 feet away. The brilliant golden head, blue-gray wings, and white

under the tail were seen. The 2 male Summer Tanagers (Susan Rozelle) were on opposite sides of the lake at Camp Ridgecrest for Boys.—ROBERT RUIZ, 300 Wilson Avenue, Swannanoa, N.C. 28778.

AVERY COUNTY, N.C. (center: [not specified; apparently in the Grandfather Golf and Country Club vicinity.—HL]).

22 May. [This date falls a week later than the last date specified for conducting a CBC Spring Count. The count was accepted only because it censused a high mountain area.—HL] Three Pied-billed Grebes (Compiler, Kevin Wentworth) at Grandfather Lake were rather late. Pair of Wood Ducks (Compiler, Russell Pratt) was on the GGCC lake. Sharp-shinned Hawk (Compiler, Wentworth) was seen from the Grandfather Mountain toll road. A Bobwhite, somewhat unusual in the area, was heard calling in the campground area on Grandfather Mountain. A pair of Brown Creepers was building a nest at the GGCC clubhouse. Cape May Warblers were scarce this spring. Least Flycatcher, unusual in the region, was heard calling at the side of a fairway at the GGCC.—MARGERY PLYMIRE, Box 306, Linville, N.C. 28646.

FIELD OBSERVERS

MOREHEAD CITY, N.C.: John Fussell II, John Fussell III, Donna Goodwin, R.J. Hader, Kevin Hintsa, Don Hoss, Darryl Moffett, Eloise Potter, Allyn and Joanne Powell, McDuff Wade, David Whitehurst.

WILMINGTON, N.C.: Katherine Alexander, Edna Appleberry, Bobby Austin, Robert S. Brown, J.H. Carter, Dot Earle, Steve Everhart, Willard Greene, John Hardwick, Kitty Kosh, Harry Latimer, Greg Massey, Polly Mebane, Ann Nicholson, Frances Needham, James Parnell, Marty Pridgen, Mary Urich, Charlotte Waggett, Jeffrey Williams.

CBC Roundtable

(Continued from Page 77)

Death Claims Two Club Members

T.M. Rial of Aiken, S.C., died 1 November 1976. Tom was an enthusiastic birder and dedicated conservationist who devoted much time and energy to CBC, Georgia Ornithological Society, and several other organizations with similar goals. "Big Bird" rarely missed a CBC meeting, and he resigned from his post on the Executive Committee only when forced to do so by failing health.

Mrs. Jack Willis of Ocracoke, N.C., also died recently. Fonnie was a gracious hostess to many visiting birders. Her final contribution to ornithology was an extensive revision of the Hyde County bird list incorporating many of her unpublished records.

New CBC President

Mrs. Tommy Dabbs of Sumter, S.C., has been confirmed by the Executive Committee as the new president of Carolina Bird Club. Evelyn succeeds F.M. (Pat) Probst, who will continue to edit the *CBC Newsletter*. According to Evelyn, the winter CBC meeting will be at Wilmington with headquarters on the UNC-W campus. Winston-Salem bird club members plan to host the spring meeting. Watch your *Newsletter* for full details.
