It’s Not Even Summer… But Start Thinking Fall!

CBC Fall Meeting - Litchfield Beach, SC

Don Faulkner

We are heading back to the South Carolina coast for the September meeting. The last time we were on the SC coast (Beaufort, September 2011), we had a record 203 bird species. That would be a great target to shoot for this fall!

The dates for our meeting are Friday and Saturday, September 27th and 28th. Our headquarters are located at the Litchfield Beach & Golf Resort at 14276 Oceans Highway, Pawley’s Island, SC 29585. Call 877-854-6358 for reservations. Litchfield lies halfway between Georgetown and Myrtle Beach, SC.

The accommodations at the hotel, both hotel rooms and meeting rooms, are excellent. The hotel rooms are Summerhouse Scenic Suites and have two Queen beds, a living area with a full kitchen, and all the amenities at a cost of $89.10 plus taxes. Each room has a balcony with either a pool or lake view. We always try to ensure that we have the hotel’s lowest cost for the rooms when setting up a CBC meeting. However, since this hotel is in a golfing area, they cannot guarantee that they will not have some specials available between now and September. If you are looking for a bargain, you can check the hotel website or call the front desk.

The hotel breakfast buffet opens at 6 a.m. and has about everything imaginable on it. It is a little pricey compared to what we normally have at these meetings ($9.95 plus tax and tip) but we do have options. There is a Starbucks on site that opens at 6 a.m. and a breakfast & brunch restaurant across the street (Eggs Up Grill) that also opens at 6 a.m. And if all else fails, you will have a complete kitchen in your room.

The meeting room for Friday is a movie theater with stadium seating, and Saturday night’s meeting will be in a ballroom set up for buffet dining. The Saturday buffet is $25 per person and includes traditional tossed salad, Chicken Francaise, Pasta Primavera, fresh vegetable medley, roasted red potatoes, rolls & butter, coffee, and tea.

The restaurants, places to visit, attractions, and activities in this area of South Carolina are too numerous to list. Over 100 golf courses, killer shopping, dinner theater, fishing, sunbathing, and boating are just a few of the many things to keep non-birding partners busy, or that can be added for an extended visit. More information on these items will be available at registration.

Now to the important part, birding. We are in the heart of coastal birding for South Carolina. Just next door to our hotel lies Huntington Beach State Park, which is one of the choice locations for birding in the Carolinas. As of 2012, the park list stood at 315 species. In addition to HBSP, we have Bull Island, South Litchfield Beach, Myrtle Beach State Park,

(Continued on page 5)
When asked what changes have affecting birding the most over the past quarter century, several items come to mind. Certainly the improvements in optics make searching for and identifying birds more enjoyable. I suspect telling a young birder toting a low-dispersion-optics spotting scope that you made do with a Bushnell Spacemaster would be akin to explaining that we actually had to get up and walk over to the television to change the channel.

Many might point out that habitat and environmental changes are more significant. Some may lament that continued habitat degradation makes for an uncomfortable future if trends continue, while the more optimistic might point to the Osprey, Bald Eagle, or Peregrine Falcon gliding overhead as an example of what we’ve done right.

But I suspect that the biggest change to birding over the past twenty-five years is the use of the Internet. The information superhighway certainly includes a lane for birders, and rare bird sightings, site information, arrival dates, and pretty much anything else pertaining to birds and birding can be had at the click of a mouse or the tap of a touchpad.

One of the more useful tools for birders are the mailing lists collectively known as “listserves”. Most states have at least one, and larger or heavily birded areas such as California, New Jersey, and Florida have several.

Of course the Carolinas have our very own Carolinabirds, which celebrated its sixteenth anniversary recently. Managed over the years by Will Cook, Carolinabirds links birders from the Carolinas and beyond together at the speed of the Internet.

To see how Carolinabirds has grown since its inception, let’s look at some statistics including the total number of subscribers on each anniversary date, geographical location of subscribers, gender, and for Carolinas birders, province.

So from humble beginnings in 1996, the Carolinabirds tool has become a daily part of the e-mail inboxes of over twelve hundred birders. An unknown number of folks also follow Carolinabirds on the Internet at birding.aba.org.

So are you one of the “Original 17”? Have you never heard of Carolinabirds until now and want to know more? If you fall into the former group, you probably still enjoy keeping your finger on the pulse of Carolina birding by reading the daily posts. If you are part of the latter group, you might be missing out on a valuable tool that can increase your birding success and enjoyment. Information on how to subscribe and manage your subscription can be found at: http://people.duke.edu/~cwcook/cbirds.html

Hope to “see you” and read about your birding adventures on the web! Special thanks to Will Cook for allowing the use of numbers from his “annual report” for this article.
When Richard Crossley’s novel approach to bird identification (The Crossley ID Guide: Eastern Birds, ISBN 9780691147789) hit stores in 2011, many birders took a polarized approach. Some loved it while others felt it provided them with little value. In fact, I had rarely seen so much emotion associated with a bird book, usually a subject that causes little debate other than the faithfulness of the plates’ color reproduction. Birders who liked it appreciated the chance to see birds as they are often seen in the field, in habitat, under varying lighting conditions, and usually smaller than a rendering in a field guide. Many noted, as does the author, that this book was not intended to be a field guide, but rather an identification guide, a tome created to help birders learn what to look for when out in the field, if not a book to be carried along for use in field identification.

I personally like the way that Crossley approaches “armchair identification skill building”, and thus eagerly anticipated the release of the follow-up book devoted to raptor identification, The Crossley ID Guide: Raptors.

Raptors are one of those groups of birds that give even seasoned observers fits. Perched hawks often look fairly similar, and variation within one species may overlap with one or more other species, to the point that raptors are often easier to identify in flight, not something that can be said for many other types of birds.

Hawkwatchers often talk about the “feel” of the bird or the “giss” (a term with a murky past that is most frequently associated as an acronym for General Impression of Shape and Size). Ask a hawkwatcher how they know that speck on the horizon is a Broad-winged Hawk and, often as not, there is not a particular field mark they can point to, but a feel developed over time and by watching a lot of hawks.

If this were not enough, you can also test yourself on “Perched Buteos”, “The Widespread Common Raptors”, “Hovering Birds”, “Southeastern Raptors”, “Going Away!”, “Sunrise on the East Coast”, “Into the Sun”, and more. Of course once you’ve memorized the answers, the quizzes won’t be as helpful as they were initially, but by then you will likely have enhanced your raptor identification skills significantly!

(Continued on page 5)
The Unfeathered Bird arrived on the stoop the other day in a plain brown wrapper, the type often used to make anonymous the contents within. I must admit I felt somewhat voyeuristic as I settled into the couch and opened the book, noting with satisfaction the crisp sound as the cover turned for the first time to reveal printed pages. Shades drawn to avert prying eyes, I began to leaf through page after page of alluring drawings depicting a variety of lovely creatures in all nature’s glory. That is to say sans… everything.

Now before you think that this book that arrived so plainly may be illegal in some municipalities, or at least inappropriate in most, note that there is barely any skin shown at all. Very little skin, and almost no feathers. Really! And of course we are talking birds here! But The Unfeathered Bird is unlike pretty much any other bird book that you could bring to mind. Artist, taxidermist, and former curator of ornithological collections at London’s Natural History Museum, Katrina van Grouw offers an unusual and appealing 304-page volume depicting birds in various states of “undress”. More than three hundred drawings with accompanying narration lead the reader through what goes on “under the feathers” of some of our favorite avian species. These drawings were made over a span of twenty-five years as van Grouw and her husband prepared bird specimens.

So what is happening under there? How do bird skeletons provide adaptations that allow albatrosses to soar effortlessly on the wing for days at a time, allow auks to fly and dive with similar elegance, or create such superb spearfishers in darters? By deconstructing birds and revealing fine detail of muscles, bones, organs, and other “behind the scenes parts”, van Grouw shows us some of the remarkable physiological structures that allow birds to do what they do best.

Some of the drawings pull at the heartstrings. A Great Auk poses on a museum’s wooden stand, for none of us have seen one in the wild. A Dodo skull reminds us of what we’ve lost, and what we stand to lose if overuse of resources continues. Other pages are more whimsical, a robin leaping into flight with all the appearance of a plucked chicken, that same bird perched on a branch with an earthworm clasped in the bill.

The Unfeathered Bird makes for a solid addition to a birder’s library as well as an attractive coffee table centerpiece. Unlike the photo mosaics that frequently inhabit such furniture, van Grouw’s work may spark more than passing conversation as your guests explore the inner world of birds.
Litchfield
I’on Swamp, Waccamaw NWR, Samworth NWR and Santee Coastal Reserve WMA, to name just a few.

Some of the species we hope to see include Red-cockaded Woodpecker, Wilson’s Plover, Piping Plover, American Oystercatcher, Marbled Godwit, Short-billed Dowitcher, Glossy Ibis, Wood Stork, Black-crowned Night-Heron, Anhinga, Clapper Rail, and Common Ground-Dove.

Registration information, more meeting details, and trip descriptions will be included in the next Newsletter. Come on back to the coast and help us break that 200 bird species count once again!

Crossley
Crossley’s raptor book differs from the Eastern birds volume in that it weighs significantly less, as one might expect from a book devoted to a single family of birds versus one that aims to cover the entire avifauna of an area. This means that Raptors may not fall into the “I like it, but it is too heavy to carry with me” trap. Though smaller, the book still runs 286 pages. The first 173 include the introduction and the photographic plates, while the remaining pages provide range maps and comments on flight style, size and shape, plumage, geographic variation, molt, migration and status and distribution.

In summary, if you liked the Eastern guide, Raptors should be a natural addition to your library. If you did not like the Eastern guide, give Raptors a try. The treatment of a bird family that is often more easily identified in flight may make you a fan. Next up for Crossley, a look at Western North American birds, and then a hop across the pond for British birds!

The *CBC Newsletter* is published bimonthly by Carolina Bird Club, Inc. Founded in 1937 the membership is open to anyone interested in birds, natural history, and conservation. Current dues are: Individual & non-profit, $25; Family, $30; Student, $15; Patron, $50 and up; Sustaining & businesses, $30; Life, $500; Associate Life (in household with Life Member), $100 (both Life memberships can be paid in four annual installments). Membership dues of $25 include $4 for a subscription to *CBC Newsletter* and $5 for a subscription to *The Chat*. Cost for CBC bird checklists, including postage: 10@$5.45, 25@$13.40, 50@$27.00, and 100@$54.00. Submit application for membership, change of address, and payment for checklists to: CBC Headquarters Secretary, 9 Quincy Place, Pinehurst, NC 28374. Copyright © 2013.
